

Cleaning and caring for granite

Everyday tips

Ukinox Granite Sinks are extremely durable and non-porous making them long-lasting and very hygienic. This also means cleaning them is quite simple too. Using a soapy nylon brush and scrubbing in circular motions will usually do the trick. Just remember to thoroughly wash away any extra soap left behind after cleaning.

Stubborn stains

For stubborn stains on granite, we recommend using any of these products: dishwasher soap, white vinegar (best for limescale) or a mild bleach solution. For rust stains, we recommend using cleaning agents that contain oxalic acid. And always make sure you thoroughly rinse away any cleaning agents once you've finished.

What to avoid

Strong alkalis like ammonia and caustic soda solution drain unblocking chemicals that involve filling the sink with water should not be used
